

WETO – MIRACL, WIRED / SETO - ASSIST

WEDNESDAY: SESSION 2, TRACK 1

SESSION CHAIRS

- David Walter, Department of Energy
- Bret Barker, Department of Energy

SESSION ABSTRACT

The Microgrids, Infrastructure Resilience, and Advanced Controls Launchpad (MIRACL) is a project of the U.S. Department of Energy's (DOE's) Wind Energy Technologies Office (WETO) targeted at accelerating distributed wind (DW) technology development into the expanded distributed energy future.

This session will focus on challenges, as well as tactics, technologies, procedures and measures that are being addressed within the MIRACL and other renewable research projects that provide promising strategies for best advancing distributed resilience. The sessions will include discussions of the tradeoff analysis that allows utilities and microgrid designers to plan and phase future enhancements in a prioritized fashion.
